

How to configure *liferay* portal at *linux* destination:

Important folder and files to backup!!! (*liferay* db (table *lportal*) and data folder from *liferay* *../CATALINA_HOME/data*)

tomcat:

1. install tomcat (all function only run on *tomcat 6.0.18* !!!)
2. edit *catalina.properties* (change *common.loader* to):
common.loader=\${catalina.home}/lib,\${catalina.home}/lib/.jar,\${catalina.home}/lib/ext/*.jar*
3. change files at */CATALINA_HOME/lib/ext* after "ant deploy" at ***scy-com-ext***:
overwrite *portal-kernel.jar* and *portal-service.jar* with own copies of this files (destination of own files ***scy-com-ext*** root)

database:

1. create db *lportal*
2. grant user privileges on db
3. create tables for own extension portlets from ***scy-com-ext/db.txt*** after run *liferay* at tomcat first time

liferay:

1. Create folder for svn files
2. Check out ***scy-com-Plugins_SDK***, ***scy-com-ext***, ***scy-elo-portlet***
3. Edit properties files (*/scy-com-ext/*):
app.server.User.properties: change User to name of local user with rights;
app.server.tomcat.dir to tomcat dir
build.User.properties: change User to name of local user with rights
4. Edit properties files (*/scy-com-ext/ext-impl/src/*):
portal.ext.properties: - change db config
- change cache setting for production
5. "ant deploy" at ***scy-com-ext*** (install main *lf* with ext extensions)

Maven Elo portlet:

1. Download maven-sdk from Site <http://wiki.github.com/azzazzel/liferay-maven-sdk/download-and-install>
2. Unrar files to local dir
3. Execute „mvn install“ at this directory (Important only install will work not package !!!)
4. "mvn clean package" at destination "***scy-elo-portlet***"
5. move/cp dest war to *liferay* deploy folder (from tomcat as parent the folder is *../deploy*)
6. wait for autodeploy from *liferay* if tomcat server is started

extended liferay community portlet (at moment wol-portlet):

1. Change *build.user.properties* file name to build."username" of local *system.properties* (***scy-com-Plugins_SDK***)
2. Change *app.server.dir* at property file to tomcat destination folder
3. "ant deploy" at ***/scy-com-Plugins_SDK/portlets/wol-portlet***

Liferay scy theme:

1. If step 1+2 is not done from "extended liferay ..." then done yet
2. "*ant deploy*" at ***/scy-com-Plugins_SDK/themes/scy-theme***
3. wait for autodeploy

Chat potlet:

1. goto admin - control panel - *plugin installtion*
2. "*install more*"
3. search "*chat*"
4. "Chat (v5.2.2.1)" *install*
5. change portlet properties at ***/tomcat/webapps/chat-portlet/WEB-INF/classes/portlet.properties*** file
to *buddy.list.strategy=friends*
